

Roofseal Roofing Mesh

Durable & Long Lasting Choice

BRC3315 Galvanised Welded Mesh

BRC3315 Galvanised Welded Mesh is made of selected quality iron wires through high precision processing. The end product is level and flat, sturdy in structure, and equipped with an even strength throughout. It is attached to the roof framing as durable & long lasting support for roofing underlay and insulation which is widely used in industries that includes farming, construction, transportation and mining for protection of structure, safety segregation, keeping of poultry and livestock, decoration and many more.

* Square opening size: 75mm x 75mm

Economical Alternative

Hexagonal Galvanised Wire Netting

Hexagonal galvanised wire netting is also known as chicken netting. Hexagonal galvanised wire netting is manufactured using galvanised mild steel wire. It is attached to the roof framing as an economical support for roofing underlay and insulation. It is widely used in industries which includes farming, construction, transportation and mining for protection of structure, safety segregation, keeping of poultry and livestock, decoration and many more.

* Hexagonal opening size: 25mm or 50mm

Benefits

- Commonly used as support for roof insulation & underlay
- Provides good corrosion resistance
- Fine quality mesh that provides reliability, sturdiness, durability, and cost-effectiveness.

Application

- Suitable for use to all residential, commercial & industrial buildings.
- Suitable for both timber and steel structures.
- Used over trusses or as a safety net over top plate.
- Easy to work with - Contours easily around hips and valleys.
- Unique shape and small mesh size helps prevent tools falling
- As a support for aluminium foil and bulk insulation (Rockwool, Glasswool).
